

# Data Sheet

## Product Description

Green-fom Acoustic Damping Sheet is manufactured from a mixture of bitumen, plasticizers and rubber with fabric backing. It provides an economical and effective solution of sound insulation for construction of ceiling and wall partition and other applications for improving acoustic insulation performance.

## Benefits

- Available in panel and roll packing
- Flexible and easily cut
- Easy to handle and fix
- High density and ductile
- Three standard weights available
- Economical and effective sound insulation solution
- Incorporated with Acoustic ceiling system ASTM E90 rated STC 89

## Applications

- Construction of ceiling and wall partition
- Sound proofing of formed metal materials
- Metal panels in the automotive industry and machinery
- Damping treatment for motor
- Air-conditioning ductwork and the home electric appliance
